Excel spreadsheet for warehouse inventory

Inventory Management has never been easier warehouse management apps (such as Inventory Management App and Store Inventory App) have been on AppSheet's top 10 most popular sample app list since we started tracking this in 2016. Over the past two years, we have seen a huge growth in the number of use cases for inventory management with no end in sight. The Inventory Management app has the following powerful features: The app automatically sets dates and uses the phone/tablet camera as the barcode reader. A daily email report reminds the user to change the order of inventory. You can navigate the various inventory items by category. An independent view to see all items that need to be filled in inventory. Current inventory data is associated with sales and purchasing data. Why the trend? Businesses and organizations automate data capture by tracking and updating inventory data in real time through barcode scanning or image capture. What does an Excel worksheet have to do with this? Well, it's actually a great starting point for creating an app that automates the warehouse management process for you. My recommendation: Start with a spreadsheet and turn it into an app that uses an app maker platform like AppSheets. Of course, we're not the only platform out there, but we're the only one who can easily take a spreadsheet and make it an app! If you're considering creating an inventory app on your own, you need to start the process with a spreadsheet, and there are some great Excel warehouse management templates. The following sections describe some excel templates for free warehouse management that can help you get started. Of course, you can just use the templates and adopt them for your own business needs, or you can turn them into apps – it's up to you! General on-hand inventory in inventory Excel Never has tracked inventory, but will start tracking it now? This easy-to-get template has all the most important items you need to track. It consists of three tabs: Daily Stocktake records shares coming in and exiting a company on a daily basis. Stock Database allows you to enter more detailed information about each item. Stock Inventory associates the Warehouse and Warehouse columns with the Daily Stocktake, and after you book into the first warehouse, the spreadsheet finally calculates inventory for you. Of course, to meet your business needs you can add or update columns. For example, if you want to manage reordering, you can add columns for reorder levels and reorder quantities. Bonus: I changed the excel template above and convert it to an Inventory Management App. The app allows warehouse managers to do the following: Use a barcode scanner to record stock in and store out (your phone or tablet can serve as a barcode scanner); Automatically calculate the current inventory level; View in a view which items need to be refilled. Send email notifications for Add warehouse to the procurement department. Copy the Excel template and app and customize your own way. If you want to how the app was created, read this blog. Excel Template for Production Warehouse This template works for all companies that buy raw materials, produce in-house, and sell products to customers. For example, a bicycle manufacturer, a furniture manufacturer or even a car company. This template consists of three main tabs – Sales, Parts, and Warehouse. Orange columns allow you to enter data. Based on this, the template automatically calculates and fills in data. On the Sales tab, enter the Sales_Quantity and the template calculates sales quantities per day and sends the data to the Inventory table. On the Parts tab, there are Parts, Parts_Barcode, and Low Inventory Alert. I suggest you Parts_Barcode if you have many parts. Barcode allows you to easily scan a section and update your sales and production data. Low Inventory Alert or Re-produce Point tells you that market demand exceeds supply and you need to produce more. On the Warehouse tab, the template automatically generates first inventory and daily inventory. The first inventory is equal to the previous day's inventory. Daily inventory is equal to first stock plus daily production minus daily sales. Bonus: I converted this spreadsheet into a mobile app. You can use it on iOS and Android devices. The app promotes team collaboration — production teams, sales teams, and warehouse teams can enter data at the same time. It allows warehouse managers to check inventory data anywhere and anytime. It eliminates data entry errors and data transfer errors from paper to computers. It allows sales managers, production managers and warehouse managers to draw historical data, conduct analyses and make decisions about it. The inventory view shows each subgroup's daily inventory and the previous day's on-hand inventory. On-hand inventory template Template Template is for companies that have warehouses and put the raw materials in bins of different sizes in different bin locations. The template has three categories – Inventory list, Inventory picker list, and Bin Lookup. The Inventory List tab tracks the number of SKDs in different bins and locations and flags SKDs that need to be rearranged. On the Inventory Item list tab, users can easily find where to retrieve an item and the quantity of the item. The Bin Lookup tab acts as a bin database where information such as size, put-away, and bin number are stored. Bonus: An inventory update efficiency app This app can replace product inventory paper logging for faster input, real-time inventory analysis, and alerts when items require a check or reorder. Features include: Barcode and NFC Tag scanning for quick inventory edits; Custom formats to highlight popular products and those with low inventory levels; Email notifications about low-stock products. Messages for receipts and shipping. What's next? These are just some of my favorite Excel templates for warehouse management. You can use them as they are or easily create your own apps. Check out our sample inventory management apps here and note, they were all made of spreadsheets! If you have other favorite Excel templates, let me know by submitting a comment or tweet. I'm always looking for templates to add to this list! Related stories: Ready to take the item tracking to the next level? Copy the following app and customize your own way! Stuck to math homework?
